CLAIMS

What is claimed is:

1. A system that facilitates analyzing a network, comprising:

a network interface component that facilitates access to the network, the network interface component comprising:

a network traffic analyzer (NTA) component that analyzes network data.

- 2. The system of claim 1, the network traffic analyzer comprising a filter component that facilitates associating subsets of network data with respective sources and/or destinations of the data.
- 3. The system of claim 1, the NTA comprising a control component that facilitates controls of at least a subset of the network based at least in part upon an analysis of network data by the NTA.
- 4. The system of claim 1, the NTA further comprising an artificial intelligence component that performs a probabilistic analysis on the network data to facilitate determining a state of the network.
- 5. The system of claim 1, the NTA further comprising an artificial intelligence (AI) component that performs a probabilistic analysis on the network data to facilitate inferring a state of the network.
- 6. The system of claim 5, the inference relates to a predicted future state of the network.

- 7. The system of claim 5, the inference relates to a predicted future state of a device that is part of the network.
- 8. The system of claim 1, the NTA is an asynchronous integrated circuit (ASIC).
- 9. The system of claim 1, the NTA is software that makes up part of the network interface.
- 10. The system of claim 1, the NTA is a combination of software and hardware that makes up part of the network interface.
- 11. The system of claim 1, further comprising a data store that has stored thereon historical data relating to state(s) of the network.
- 12. The system of claim 5, the AI component comprises at least one of: a trained classifier, a neural network, a data fusion engine, a Bayesian belief network, a Hidden Markov Model.
- 13. The system of claim 1, the network traffic analyzer filter component comprising a data acquisition component that facilitates a filter and analysis of network related data problems.
- 14. The system of claim 2, the filter component further comprising:
 - a source MAC ID filter component;
 - a destination MAC ID filter component; and
 - a packet type filter component.

- 15. The system of claim 14, the filter component further comprising:
 a sequence number filter component;
 a packet length filter component; and
 a checksum component.
- 16. The system of claim 3, the control component further comprising a data collection start/stop component.
- 17. The system of claim 16, the control component further comprising: a memory status and control component; and a memory upload and download component.
- 18. A network analysis system comprising; means for accessing and interfacing with a network; and means for analyzing the network, the means for analyzing is integrated with the means for accessing and interfacing with the network.
- 19. A method for allocating network traffic analysis tasks to networked devices comprising:

activating respective monitoring components in a plurality of devices of a network;

requesting resource utilization data from a subset of the activated monitoring components;

accepting resource utilization data from the subset of activated monitoring components;

evaluating the resource utilization data;

determining which devices have greatest available resources based at least in part on the resource utilization data; and

allocating network traffic analysis tasks based at least in part on the available resources.

20. A method for allocating network traffic analysis tasks to networked devices comprising:

activating a monitoring component in more than one device on a network; requesting resource utilization data from each activated monitoring component; accepting resource utilization data from each activated monitoring component; evaluating the resource utilization data;

determining which device has the greatest available resources based at least in part on the resource utilization data; and

allocating the network traffic analysis tasks to the device with the greatest available resources.

21. A method for allocating network traffic analysis tasks to networked devices comprising:

activating a monitoring component in more than one device on a network; requesting resource utilization data from each activated monitoring component; accepting resource utilization data from each activated monitoring component; evaluating the resource utilization data;

determining the available resources for each device based at least in part on the resource utilization data;

allocating the network traffic analysis debug task to the device with the greatest available resources; and

allocating the network traffic analysis control task to the device with second greatest available resources.
